### INTERNATIONAL SEARCH REPORT

(PCT Article 18 and Rules 43 and 44)

Applicant's or agent's file reference <b>FP12911</b>	<div style="display: flex; justify-content: space-between;"> <div style="width: 30%;"> <b>FOR FURTHER ACTION</b> </div> <div style="width: 70%;">                     see Notification of Transmittal of International Search Report (Form PCT/ISA/220) as well as, where applicable, item 5 below.                 </div> </div>	
International application No. <b>PCT/AU00/00647</b>	International filing date ( <i>day/month/year</i> ) <b>8 June 2000</b>	(Earliest) Priority Date ( <i>day/month/year</i> ) <b>8 June 1999</b>
Applicant <b>OPTISCAN PTY LTD et al</b>		

This international search report has been prepared by this International Searching Authority and is transmitted to the applicant according to Article 18. A copy is being transmitted to the International Bureau.

This international search report consists of a total of 4 sheets.

☐ It is also accompanied by a copy of each prior art document cited in this report.

**1. Basis of the report**

a. With regard to the **language**, the international search was carried out on the basis of the international application in the language in which it was filed, unless otherwise indicated under this item.

☐ the international search was carried out on the basis of a translation of the international application furnished to this Authority (Rule 23.1(b)).

b. With regard to any **nucleotide and/or amino acid sequence** disclosed in the international application, the international search was carried out on the basis of the sequence listing:

☐ contained in the international application in written form.

☐ filed together with the international application in computer readable form.

☐ furnished subsequently to this Authority in written form.

☐ furnished subsequently to this Authority in computer readable form.

☐ the statement that the subsequently furnished written sequence listing does not go beyond the disclosure in the international application as filed has been furnished.

☐ the statement that the information recorded in computer readable form is identical to the written sequence listing has been furnished

2. ☐ **Certain claims were found unsearchable** (See Box I).

3. ☐ **Unity of invention is lacking** (See Box II).

4. With regard to the **title**, ☒ the text is approved as submitted by the applicant.

☐ the text has been established by this Authority to read as follows:

5. With regard to the **abstract**, ☐ the text is approved as submitted by the applicant

☒ the text has been established, according to Rule 38.2(b), by this Authority as it appears in Box III. The applicant may, within one month from the date of mailing of this international search report, submit comments to this Authority.

6. The figure of the drawings to be published with the abstract is Figure No. 1

☒ as suggested by the applicant.

☐ None of the figures

☐ because the applicant failed to suggest a figure

☐ because this figure better characterizes the invention

**Box III TEXT OF THE ABSTRACT (Continuation of item 5 of the first sheet)**

A tuning fork apparatus (10) is vibrated via a coil (18) which encloses at least a portion of both tines (14, 16), thereby inducing mutually repulsive magnetic fields in the tines (14, 16). The coil may be elliptical in shape to reduce the size of the apparatus (10). A ferromagnetic housing may be located outside the coil (18) to form closed magnetic circuits with the tines (14, 16), to increase their magnetic repulsion. The tines (14, 16) can have different masses, such that the more massive tine is substantially undeflected. Applications include optical fibre scanning in endoscopes and microscopes.

Inventive step (IS)	Claims 1-29	YES
	Claims	NO
Industrial applicability (IA)	Claims 1-29	YES
	Claims	NO

**2. Citations and explanations (Rule 70.7)**Citation

D1 : Patent Abstracts of Japan, P-500, page 97 (JP 61-102512)

NOVELTY (N) AND INVENTIVE STEP (IS)

D1 represents the closest prior art, and teaches a tuning fork 1 with base 3 and tines 11, 11A; where a single driving coil 14 receives the upper part of the tines, and where current through the coil induces repulsive magnetic fields in the tines, thereby oscillating the tines. However, D1 teaches an AC driving current. This is incompatible with the use of a varying substantially uni-directional current as per the claims (eg, lines 10-11 of claim 1), and is moreover relatively inefficient (see page 9 lines 16-27 of the instant application). Hence the claims are novel and inventive over D1.

INDUSTRIAL APPLICABILITY (IA)

The subject matter of the claims is applicable to optical scanning devices.

(54) Title: ELECTRICALLY OPERATED TUNING FORK

(57) Abstract: A tuning fork apparatus (10) is vibrated via a coil (18) which encloses at least a portion of both tines (14, 16), thereby inducing mutually repulsive magnetic fields in the tines (14, 16). The coil may be elliptical in shape to reduce the size of the apparatus (10). A ferromagnetic housing may be located outside the coil (18) to form closed magnetic circuits with the tines (14, 16), to increase their magnetic repulsion. The tines (14, 16) can have different masses, such that the more massive tine is substantially undeflected. Applications include optical fibre scanning in endoscopes and microscopes.

WO 00/75712 A1

**REPLACED BY  
ART 34 AMDT**

induced;

a electrical coil for receiving at least a portion of both tines of said tuning fork;

whereby at least one of said tines can be  
5 vibrated relative to the other of said tines by passing a varying current through said coil and thereby inducing mutually repulsive magnetic fields in said tines.

Preferably said material is magnetically permeable, and  
10 more preferably said material is ferromagnetic.

Thus, although this method of vibrating the tine or tines may be less efficient than the existing arrangements (in which the magnetic fields produced by current in the  
15 electromagnets are longitudinal); here they are essentially transverse, resulting in mutual repulsion between the tines even in the absence of any other magnetically active material. Preferably the tines are vibrated at the resonant frequency of the tuning fork. With this  
20 configuration, both winding strength and packing density of the coil can be maximized by eliminating the need for windings between the tines. The winding is external to the fork and preferably extends over nearly the entire length of the fork, contributing to driving force through induced  
25 magnetism even in the base region where the tines are joined. This arrangement therefore allows the largest winding volume, though the winding strength is reduced owing to the larger diameter of the turns compared with the localised windings of the existing designs. However this  
30 is compensated by the large cross section available for the winding. At any point along the entire length of the fork the (typically coaxial) winding of the coil contributes to the driving force, even the region beyond the base of the tuning fork.

35

Preferably said tips of the tines protrude from the coil so that said at least one of said tips can vibrate by a

on said at least one of said tines.

Preferably said coil is a former-less coil.

- 5 Preferably said apparatus includes a sensor to provide a signal indicative of the position of said at least one tine so that the tuning fork can be maintained at resonance.

- 10 Preferably said sensor is a piezoelectric sensor, a fibre sensor system, a hall effect sensor or a series capacitive sensor.

- 15 The present invention also includes an endoscope, microscope or endomicroscope including an apparatus as described above.

- The present invention also includes a scanning head for an endoscope, microscope or endomicroscope including an apparatus as described above.

20

- The present invention still further a method for electrically vibrating a tuning fork having a base and a pair of tines, said tines and having tips remote from said base and formed of or including material in which a magnetic field can be induced, said method comprising:

- 25 locating at least a portion of said tines within a electrical coil; and

- passing a varying current through said coil to induce mutually repulsive magnetic fields in said tines and thereby inducing at least one of said tines to vibrated relative to the other of said tines.

30

Preferably said material is magnetically permeable, and more preferably said material is ferromagnetic.

35

Preferably said method includes arranging said tips to protrude from said coil so that said at least one of said

## THE CLAIMS DEFINING THE INVENTION ARE AS FOLLOWS:

1. An electrically operated tuning fork apparatus,  
comprising:

5 a tuning fork having a base and a pair of tines,  
said tines and having tips remote from said base and formed  
of or including material in which a magnetic field can be  
induced;

10 a electrical coil for receiving at least a  
portion of both tines of said tuning fork;

whereby at least one of said tines can be  
vibrated relative to the other of said tines by passing a  
varying current through said coil and thereby inducing  
mutually repulsive magnetic fields in said tines.

15

2. An apparatus as claimed in claim 1, wherein said  
material is magnetically permeable.

20

3. An apparatus as claimed in claim 1, wherein said  
material is ferromagnetic.

25

4. An apparatus as claimed in any one of the preceding  
claims, wherein said tips of the tines protrude from the  
coil so that said at least one of said tips can vibrate by  
a greater amplitude than can be accommodated by said coil.

30

5. An apparatus as claimed in any one of the preceding  
claims, wherein said coil is elliptical, with a major axis  
oriented in the plane of vibration of the tines, so that a  
reduction in the total size of the apparatus can be  
achieved.

35

6. An apparatus as claimed in any one of the preceding  
claims, wherein said apparatus includes additional  
magnetically permeable material located outside said coil  
for providing a return path for the magnetic field produced  
by said coil, and attracting said tines towards said

15. An endoscope, microscope or endomicroscope including an apparatus as claimed in any one of the preceding claims.

5 16. A scanning head for an endoscope, microscope or endomicroscope including an apparatus as claimed in any one of claims 1 to 14.

10 17. A method for electrically vibrating a tuning fork having a base and a pair of tines, said tines and having tips remote from said base and formed of or including material in which a magnetic field can be induced, said method comprising:

15 locating at least a portion of said tines within a electrical coil; and

passing a varying current through said coil to induce mutually repulsive magnetic fields in said tines and thereby inducing at least one of said tines to vibrated relative to the other of said tines.

20

18. A method as claimed in claims 17, wherein said material is magnetically permeable.

25 19. A method as claimed in claims 17, wherein said material is ferromagnetic.

30 20. A method as claimed in any one of claims 17 to 19, including arranging said tips to protrude from said coil so that said at least one of said tips can vibrate by a greater amplitude than can be accommodated by said coil.

21. A method as claimed in any one of claims 17 to 20, wherein said coil is elliptical, with a major axis oriented in the plane of vibration of said at least one tine.

35

22. A method as claimed in any one of claims 17 to 21, including locating additional magnetically permeable
